

Hi, my name is Max Zedlovich. I am a 4th year computer science student. I have completed almost every required class to graduate besides discrete algorithms and language processing. I am excited to get started with NodeJS and finally build a web application. I have contributed to open source games like Space Station 13, and have worked on my own game called Crimpo Quest that I started in high school, with an hour long playable demo. I also have done work with Minecraft server hosting using docker on a home server. I have a bunch of java projects that I haven't finished, but a majority of them are games using the integrated graphics library. I also have experimented with web server hosting using integrated java libraries and using apache on Linux. I like 3D modelling using blender and playing games like Dwarf Fortress and RuneScape. I anticipate making web applications in this class, and would like to create a prototype of a social media platform or web game.
